Special edition of AT MINERAL PROCESSING

Reduce CO₂ by tens of thousands of tons?

ENDURON®
HPGR

WEIR

The answer is Enduron®

We all know HPG technology exists. Why have we not moved to a more sustainable approach? The Enduron® HPG uses up to 40% less energy without grinding media, compared to traditional solutions. Combined this could reduce your CO₂ by tens of thousands of tons annually. Plus, with our exclusive skewing and bearing system, you'll increase your mine's performance, reliability and efficiency. The real question isn't why should you make the switch, it's why not?

Make the switch to Enduron® HPGR.
Visit enduronhpgr.weir to find out more.

Legendary Technology. Modern Efficiency.™

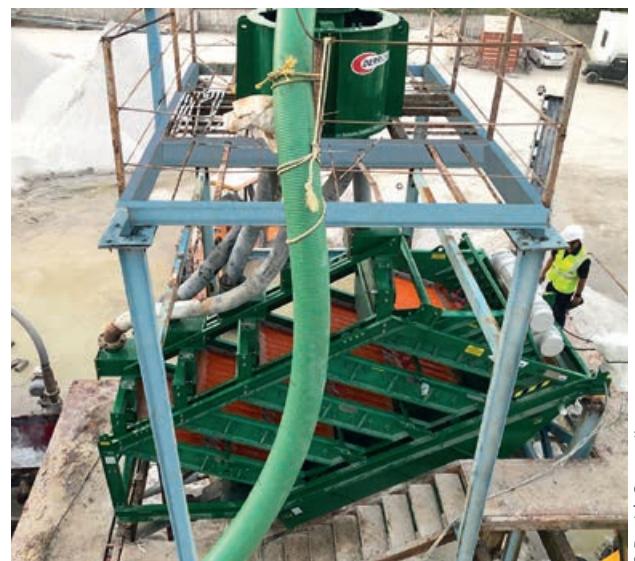

Derrick® Corporation is a family-owned and operated company with a global presence focused on pioneering fine separation technology and leading the industry in designing and manufacturing high-frequency vibratory screening machines and patented screen surfaces for more than 70 years. We empower our global family to responsibly maximize resource efficiency for a greener world. Our legendary technology has allowed processors to successfully screen a wide variety of wet or dry fine materials – coal, copper ore, gold, industrial minerals, fertilizers, iron ore, plastics, silica sand, and potash – in the range of 10 mm to 38 µm.

Modern efficiencies save energy, increase product recovery and quality, and maximize profits for processors. Additionally, structural requirements for Derrick Screens are considerably less than competing technologies due to the smaller footprint and transmission of virtually no dynamic load to the support structure.

Derrick Stack Sizer

The Derrick® Stack Sizer® redefines fine particle wet screening, offering high capacity and exceptional efficiency in minimal space. Consisting of up to five individual screen decks positioned one above the other and operating in parallel, the Stack Sizer provides a unique combination of high capacity and efficiency that sets it far above the nearest competition.

A Derrick 5-deck Stack Sizer fitted with Polyweb® panels recently replaced competing Chinese technology at a silica sand plant in Gujarat, India. Derrick's fine screens removed 100% of coarse grains in processed materials while eliminating equipment downtime and costly, time-consuming waste removal.

A 5-deck Derrick Stack Sizer fitted with Polyweb panels allows a silica sand plant customer to process 800 metric tons per line each day.

Polyweb high-temperature dry screens as fine as 140 mesh (104 microns)

© Derrick Corporation

With increased efficiency, reduced energy consumption, and less waste byproduct, the plant, which produces high-quality silica sand at competitive rates for glass production, will see a total return on investment in a short turnaround.

The patented Derrick Stack Sizer consists of up to five individual screen decks positioned one above the other and operating in parallel. A custom-engineered single or multiple-stage Flo-Divider system representatively splits the feed slurry to each Stack Sizer and then to the decks on each machine. Ample space is provided between each screen deck for easy observation during operation and easy access for maintenance and replacement of screen surfaces. Each screen deck has an undersize collection pan, discharging to a launder with a single outlet. Similarly, the oversize from each of the screen decks collects in a single hopper with a common outlet.

Polyweb® Screen Surfaces

Unlike other urethane panels, Derrick's Polyweb® panels are not only abrasion resistant, they offer a high open area and anti-blinding properties with performance that rivals conventional woven wire screens. Processing plants throughout the world have realized significant cost savings using Polyweb panels. Polyweb panels frequently last 6-12 months. Polyweb screens provide unmatched classification, resist blinding, and produce a higher-quality product. The panels can achieve wet separation as fine as 45 µm and dry separation as fine as 104 µm.

Derrick Dry Screening Applications

For dry screening applications, Derrick offers a wide assortment of single and multi-deck machines, including a 1.2 m x 3 m Front-to-Back™ tensioning system. The Front-to-Back Dry Screening Machine was engineered to provide even material distribution, leading to increased capacity and improved efficiency.

Derrick also offers linear motion screens, repulp screens, high shear screens and belt scalpers; dry screening products; urethane and woven wire screen surfaces; Flo-dividers, used to split slurry flows into various equivalent streams; hydrocyclones, such as round desilter manifolds; and vibratory motors for mining and industrial applications.

Explore Our Advancements in Aggregates & Industrial Minerals

Our advanced technology is engineered to handle the most difficult applications in the aggregates industry. We understand the importance of machine reliability and design each piece of equipment to thrive in extreme conditions.

Scarabaeus Pelletizing Disc

Scarabaeus pelletizing discs are used to pelletize fine materials in order to improve their storage and transportation properties, thus increasing their market value. The inclination, speed, and side wall height can be adjusted to for optimal operation, increasing the productivity and profitability of the entire system.

Haver&Boecker Niagara

Haver & Boecker Niagara is a leading provider in screening, pelletizing and primary crushing systems. The company's mission is to deliver the best of these technologies to customers in the mining, aggregates, minerals, cement, building materials, fertilizer and salt. With deep roots and years of experience in these industries, Haver & Boecker Niagara uses its innovative and shared technologies to effectively meet the needs of customers around the world.

© Haver Niagara GmbH

Niagara T-Class Concentric Inclined Screen

The Niagara T-Class two-bearing vibrating screen offers a high degree of versatility, and is configurable to almost any material processing application within the aggregates, mining, industrial minerals, recycling industries and more.

Global Solutions

Haver & Boecker Niagara uses its innovative and shared technologies to effectively meet the needs of customers around the world.

IFE -

Your special solution is our standard

We are the problem solver for your application

IFE Aufbereitungstechnik GmbH has been involved in the manufacture of machines for the processing of bulk materials for more than 70 years.

Constant improvements, new developments and innovations not only made us one of the world's leading manufacturers of vibroconveyors, screening machines and magnetic separators but also the only manufacturer that offers complete solutions in these product areas.

IFE banana screen – ideal for processing material with high contents of fines and high feed rates

Thanks to our practical experience across many different industries and applications of the entire bulk material processing, we can assert ourselves on the world market.

IFE TRISOMAT – the flip-flop screen for difficult-to-handle materials

**That's what characterizes us!**

It is our claim to meet customers' expectations, react quickly and reliably to their requirements and always keep our word.

IFE has a history, a tradition. We develop, collect experiences, work hard, deliver highest quality and keep our promises.

Further, we strive for long-term cooperations / partnerships with our customers, employees and suppliers. Therefore quality, environmental protection, occupational health and safety are among our primary corporate principles.

Our sales network

We are settled in the heart of Lower Austria and supply the whole world with the support of our international distribution network consisting of 35 sales partners. Sales, services and spare parts are globally available at almost any time.

We serve almost all European states, Mongolia, China, Japan, Taiwan, Korea, Canada, USA, Mexico, Brazil, Israel, UAE and Australia.

We see ourselves as a competent problem solver for our customers, using various technologies:

Products

- Vibroconveyor Technology
- Screening Technology
- Magnetic Technology

**YOUR APPLICATION.****OUR SCREENING TECHNOLOGY.**

all © JOEST GmbH + Co. KG

**No matter how different the materials to be screened are, customers can find the right solution at JOEST.**

The screening solutions offered by JOEST are as diverse as the bulk solids they are used to process. In the basic industry range, the products screened range from hard rock and sands through coal to all types of ore. These are screened in both wet and dry processes. For difficult-to-screen products, special machines are available. But for recycling too, JOEST can always supply the corresponding screen.

Flip-Flow Screens OSCILLA Family

Screening challenging and inhomogeneous products require special processing technology. During operation, blockages in the screen are almost entirely prevented and the material is dispersed to enable fine grain separation. Conventional screens are usually unable to deliver this performance – this is where JOEST Flip-Flow Screens from the OSCILLA Family are used. Typical screen cuts are in a range between 0,5 and 40 mm.

Finger Cascade Screen TopSpin

For pre-separation in recycling plants, cascade screens are increasingly used for difficult-to-screen products. Their advantage is that they screen out long pieces and inhomogeneous products with almost no blockages.

Circular Motion Screen

Circular motion screens are used for the pre- or final classification of free flowing, medium- to coarse-grained bulk materials. The basic motion of this screen is circular motion. Typically designed with an inclination of 10° to 30°, this screen enables the optimum throughput for just about any application.

Linear Motion Screen

Linear motion screens are used to meet high requirements for separation efficiency in almost all industries.

Finger Rod Screens STABROFLEX and STABROFIX

The STABROFLEX is used to screen bulk material with a tendency to clogging and cannot be screened on conventional screen decks. With its sturdy structure, the STABROFIX is used for coarse pre-separation, but especially to relieve the load on downstream crushers.

GRIZZLY Screens

Heavy duty screens with GRIZZLY bars are mainly used for pre-separation or to relieve downstream crusher from fine material.

Rod Screen GRECCO

Depending on the geological factors, in the quarrying of natural stone products (e.g. limestone, greywacke, porphyry, diabase, etc.) the material extracted can often contain a more or less high content of soil and clay which blind conventional screen decks. Such material can be screened nearly maintenance-free using JOEST GRECCO screens. The basically GRECCO screen is a STABROFLEX execution with self-cleaning effect.

Banana Screen

Banana screens are high-capacity vibrating screens. They were developed according to the "thin-layer theory" due to improve screen efficiency by separating most of the fines directly at the feed end.

Dewatering Screen

Linear-motion screens are primarily used for sand dewatering and are now used in most different industries.

Wet-Sizing Screen

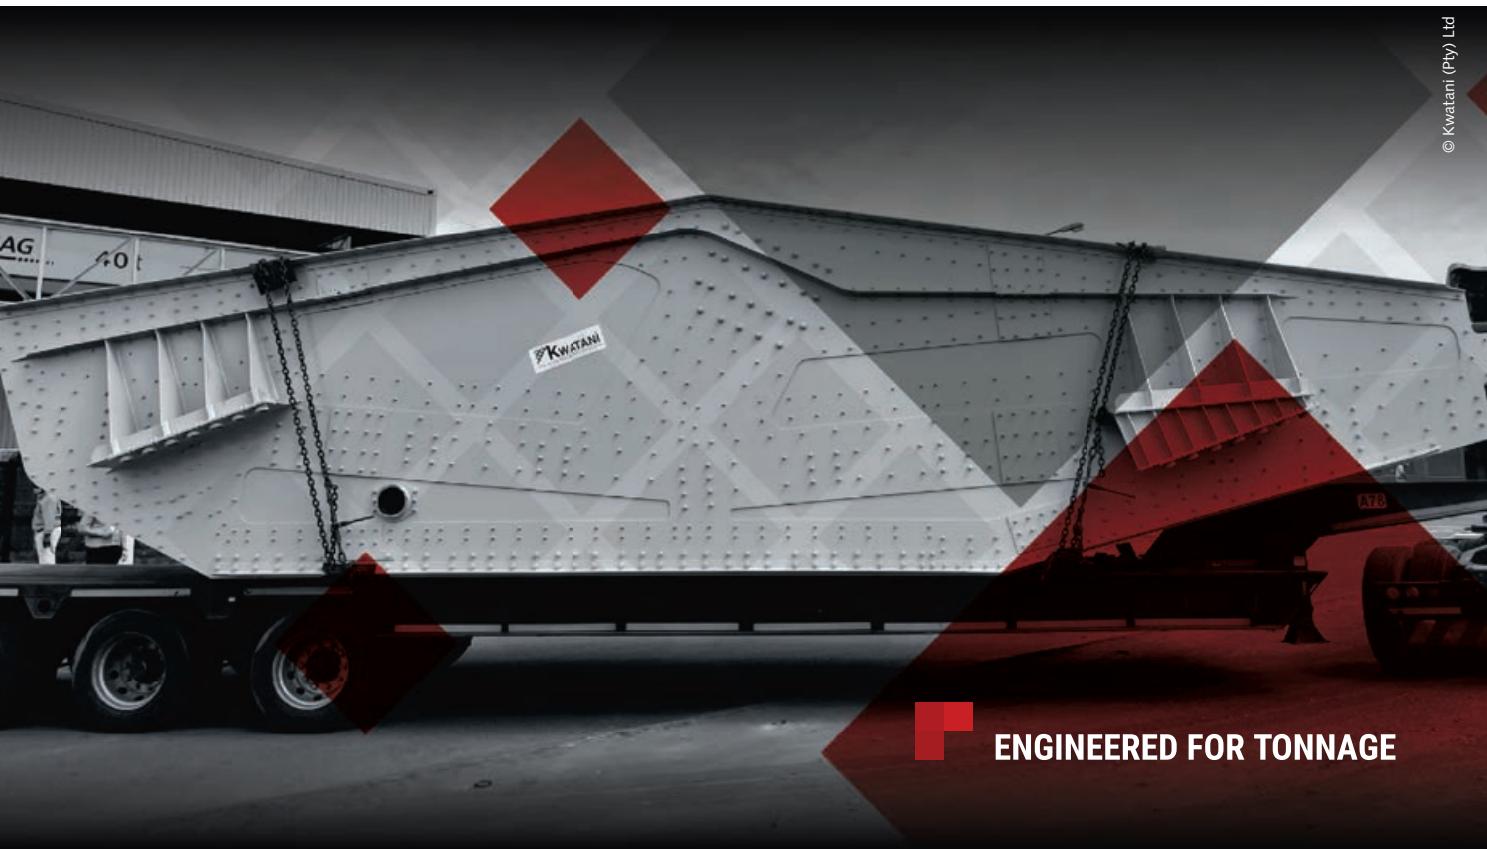

Wet-sizing screens are used to increase the straight throughput rate and to reach sharper screen cuts. Furthermore, they can be used as washing screens.

KWATANI, PART OF THE SANDVIK GROUP,
PROVIDES LEADING EDGE VIBRATION TECHNOLOGY

© Kwatani (Pty) Ltd

Kwatani forms part of the Sandvik group and is a leading OEM of customized vibrating equipment. Kwatani operates world class production facilities in South Africa and is the global engineering and manufacturing base for vibrating screens and feeders. Its vibrating equipment is sold and supported internationally through Sandvik's global distribution network.

The OEMs vibrating equipment is designed and manufactured for high performance processing efficiency, continuous tonnage, and cost reduction. Kwatani's extensive engineering, manufacturing and materials testing laboratory facilities allow the company to undertake large-scale global projects at competitive local costs. Since 1976, Kwatani has supplied an extensive vibrating screen and feeder population with +17 000 units across all commodities in +50 countries.

Kwatani's core differentiator is its ability to custom engineer vibrating equipment for high efficiency and to meet the unique needs of each application and to fit any given plant footprint at the lowest cost of ownership. Kwatani products are renowned for durability and requiring only limited spare parts.

Its largest vibrating screens are up to 4.3 m wide or 13 m long. Kwatani offers a comprehensive range of linear, elliptical, gyratory, circular and resonance motion screens tailored to each unique coarse or fine screen application to size or separate wet or dry materials across single or multiple decks. Kwatani's feeders include linear and elliptical VGF grizzly feeders, brute force feeders up to 4.8 m wide, conveyor feeders up to 15 m long and magnetic feeders. Kwatani engineers and supplies a premium range of heavy-duty exciter gearbox and unbalanced motors.

THINK BIG!

Expertise. Worldwide. August Müller GmbH & Co. KG

August Müller GmbH & Co. KG is a German plant and machine engineering company that has been firmly established in the worldwide quarrying industry for more than 125 years. From the first planning steps, through production and installation to an extensive after-sales service, the company provides exceptional customer support.

Absolute core expertise is invested in the planning and engineering of primary crushers for processing blasted material with rock sizes up to 1 500 mm edge length. These machines are designed and customized to a capacity from around 200 t/h to well over 1 000 t/h.

© August Müller GmbH & Co. KG

© August Müller GmbH & Co. KG

© August Müller GmbH & Co. KG

PLANT ENGINEERING

- Primary crushing plants with a capacity well over 1 000 t/h
- Screens / silos plants with capacities from 150 t/h to 600 t/h
- Mobile systems with capacities up to 1 000 t/h

ROLLER SCREEN

- Separation and cleaning of very dirty feed material
- Screening to 0 – 150 mm
- Capacity up to 3 000 t/h
- No sticking or clogging thanks to scrapers below the shafts
- Individual design to meet customer specifications
- Separate drive unit

FINGER ROLLER SCREEN

- Dry processing of material that has been so far impossible to screen
- Preservation of resources thanks to more efficient material yield
- Screening to 0 – 8 mm
- Capacity up to 350 t/h
- Individual design to meet customer specifications
- No sticking or clogging thanks to the special finger disc geometry
- Change in the product size by +/- 30 % with variation of the speed by means of frequency converters

Products

- Chain conveyors
- Push feeders
- Roller screens
- Finger roller screens
- Apron conveyors
- Crushers
- Belt conveyors
- Special designs

Separation with experience

Customized solutions for conveying and separation processes

Highly efficient, custom-designed to your needs and on site absolutely reliable: SPALECK screens are focused on optimizing your bulk material and recycling processes.

As one of the leading manufacturers of screening technology worldwide SPALECK is setting standards in the area of conveying and separation solutions. Whether you need a stand-alone system or a screening machine as a part of your processing line: You can rely on SPALECK.

Andreas Ahler, the managing director of SPALECK GmbH & Co. KG, comments: "We want to offer our customers the best solution for their applications. This includes an optimum screening result, an excellent product quality and a high safety of investment. The customer gets exactly this safety with our philosophy, i.e. to develop machines, which easily adapt themselves to the material to be screened."

Due to their modular design you can integrate all SPALECK machines very easily into your business. Even changing materials are no problem any longer, thanks to the patented technology which is adjustable to almost all kinds of bulk materials. Therefore you will get high screening performance, best screening results and proven solutions even for very complex materials.

SPA LECK customers profit from a proven service. In addition, SPA LECK offers its TestCenter as special service where customers and those interested may test their applications in advance and solve the tasks involved.

Corporate description

Since 1942 when we patented the Vibro-Energy Round Separator, SWECO® has been on the leading edge of separation technology. As a Schlumberger business unit, SWECO has the ability and strength of a global corporation to take care of its customers anywhere in the world.

Technologies

SWECO has the ability to separate coarse, fine, and ultrafine particle sizes, depending on your application. SWECO's use of high-speed vibration, ultrasonic technology, and centrifugal machinery enables it to effectively perform these particle processes for wet or dry applications.

In addition to the full line of vibratory round separators, SWECO offers a complete line of horizontal gyratory sifters, offering high capacity and high performance. SWECO's unique uniform gyratory motion provides equal efficiency and deblinding effectiveness across the entire screen area. Known for their durability, reliability and accuracy of separation, the ATLAS Gyratory Sifters are used throughout the world to handle numerous screening applications such as.

- Animal feed
- Abrasives
- Fertilizers
- Frac sand
- Grains
- Minerals
- Oil Seeds
- Plastics
- Salt
- Sugar
- Recycling
- Refractories
- and more

ATLAS Gyratory Sifter

© SWECO Europe S.A.

The various models of the ATLAS Sifters are engineered to allow one to four separations in a single machine, ranging from 30–800 square feet of screening area. This flexibility is available because of the ability to feed the material at a single point or independently to each deck.

The Sifters allow for quick and easy screen changes in under one minute per deck, with no heavy lifting or tedious clips to engage. The screens can be replaced from either end of the machine without the need to remove the ball trays. In the event of screen failure, the over- and under-size material from each deck can be sampled individually, eliminating the guesswork about which screen has failed. All SWECO ATLAS Gyratory Sifters come with an integral support stand that can ship fully assembled. The design eliminates the need for any assembly onsite, reducing customer installation cost, and bringing product to market faster!

Technical services

The most predominant service SWECO offers is in the field of service engineers, who on average maintain more than 20 years of experience. SWECO also offers its customers the convenience of field tests as well as on-site testing laboratories in the United States, Europe, and Asia, where full-scale tests can be run.

With 9 manufacturing or service facilities and over 100 sales offices around the world, SWECO is confident that we can provide quality, value, and performance to our customers by meeting your processing needs today, tomorrow, and far into the future.

New And Used Quarry Equipment In Stock

Over 50 CRUSHERS: JAW, IMPACT, CONE, SMOOTH- and TWO-ROLL, HAMMER MILLS etc. (Hazemag, Metso/Nordberg/Lokomo, Kleemann, Sandvik/Aubema, KHD/Wedag, Boehringer, Weserhütte, Brown Lenor/Ibag, Krupp, Ammann etc.) From 1 up to 112 Tons weight.

Over 100 VIBRATING SCREENS: From 400 x 1.000mm. up to 2.400 x 7.000mm. (Siebtechnik, Hein Lehmann, Binder, Haver & Boecker, Schenck, Cyrus, Metso/Allis/Svedala, Aviteq/AEG, GFT, Krupp, Mogensen, GFA, Locker, SKET, Rhewum, Hoppe, Derrick, Hoppe etc.)

A few hundred GEAR BOXES: Up to 375KW and 1:300 ratio. (WGWTGW, Hansen, Fender.)

Over 100 MAGNETIC SYSTEMS: Overband separators, Magnetic Rolls, Magnetic Drums, Scrap Magnets etc. From 0.5 up to 20KW Magnetic Power. (Steinert, Wagner, KHD Humboldt, Krupp, Demag Goudsmid, Bakker, AME, KN, F & G, Sket, VEB, HNS, Unac, Ardelwerke etc.)

Over 100 FEEDERS: From 500 up to 8.000mm long. From 300 up to 3.000mm width. (AEG, Jöst, UHDE, Schenck, Friedrich, IFE, Honert, FMW, BMD, Cyrus etc.)

Hundreds of ELECTRICAL MOTORS: With/without gears. Up to 355KW. (German made)

CONVEYORS, CONVEYOR-BELTS & CONVEYOR PARTS.

LEGENDARY TECHNOLOGY. MODERN EFFICIENCY.™

Derrick Corporation is a family-owned and operated company with a global presence focused on pioneering fine separation technology and leading the industry in the design and manufacturing of high-frequency vibratory screening machines and patented screen surfaces.

Our legendary technology allows processors to screen a wide variety of wet or dry fine materials with modern efficiency, increased capacity, and maximum product recovery.

We empower our global family to responsibly maximize resource efficiency for a greener world.

ACCESSORIES

Technical specifications			
Type	Application	Components	Assembly
ALLGAIER PROCESS TECHNOLOGY GMBH			
ALLGAIER PROCESS TECHNOLOGY			
Allgaier Pneumatic lift	Modular pneumatic lifting device for tumbler screening machines	Pneumatic cylinders, lifting rods, operation panel. Retrofit sets for existing screening machines	Easy to use. Fastest way for screen exchange or replacement of mesh cleaning devices. 80 % time saving against manual standard procedure in combination with Allgaier QSS system
Allgaier QSS system	Modular quick-spring-spanner for tumbler- and vibration screening machines. With optical load detection	Spring capsule and handle. Retrofit sets for existing screening machines	Easily to use. For opening and closing tumbler- and vibration screening machines without tools. With optical load detection. 80 % time saving compared to standard clamping screws
Allgaier "Multibalance" system	Optimised balancing concept for tumbler screening machines	Internal balancing components. Retrofit sets for existing screening machines	Improved fine-balancing reduces the forces applied to the foundation (concrete or steel construction). "Multibalance" prevents undesirable and damaging resonance effects
Allgaier "synchronisation" system	Optimised synchronisation for multiple tumbler screening machines, to reduce horizontal dynamic forces to the construction by 80–90 %	Internal balancing components, limit switches and additional electrical cabinet with FU and PLC control system	Improved balancing by synchronisation of multiple tumbler screeners to the same synchronisation point. Controlled by additional limit switches and electrical cabinet to control the machine speed and positions
Allgaier Ultrasonic screening	Ultrafine screening with innovative ultrasonic screen cleaning system for tumbler- and vibration screening machines	Ultrasonic screen with resonator, converter, high frequency cable, ultrasonic generator	Various functional principles with optimum mesh activation allow perfect adaption of the ultrasonic cleaning system to the screening task
Allgaier Lubrication system	Permanent and automated greasing for all bearings at tumbler- and other screening machines	Grease cartridge, timer-controller, return-grease bottle	Applies automatically the appropriate amount of grease to all bearings
True power monitoring	Permanent true power motor monitoring for motor load control	True power monitor-relais with limit adjustments for under/upper load levels up to 16 kW	Power monitor-relais as build in version into the existing electrical cabinet with signal connection to a process controlling PLC system
HAVER NIAGARA GMBH, MÜNSTER			
HAVER & BOECKER  NIAGARA	PULSE Condition Monitoring	Pulse Condition Monitoring (Pulse CM) is the next level in the Pulse portfolio, accompanying Pulse Vibration Analysis. Pulse CM uses predictive data and artificial intelligence to assist with maintenance and production planning, helping to prevent unwanted downtime or even catastrophic failures. PULSE CM collects all data from the body and drive components. Pulse CM is equipped with a gateway that can connect with up to 20 wireless sensors, within a radius of up to 246 ft (75 m). Using a cellular signal or Wi-Fi from the plant, it will send all data to the Haver & Boecker Niagara cloud, available through the company's web app. The sensor configurations are customizable and placed on both the body and bearings of the vibrating screen.

CRUSHING TECHNOLOGY

Comprehensive technical data of
crushers for a wide range of
applications

2023

Special edition of AT MINERAL PROCESSING

The **AT CRUSHING TECHNOLOGY** supplement is an essential source of information for your investment decisions. This comprehensive product survey presents tabular overviews of stationary and mobile crushers (impact crushers, cone crushers, e.g.) – **free of charge**.
